BAKING METER BC-10 Plus

Instruction Manual

Notes on this Manual

- Copying or reproduction of all or part of the contents of this manual without the permission of KONICA MINOLTA is strictly prohibited.
- The contents of this manual are subject to change without prior notice.
- Every effort has been made in the preparation of this manual to ensure the accuracy of its contents. However, should you have any questions or find any errors, please contact a KONICA MINOLTA-authorized service facility.
- KONICA MINOLTA will not accept any responsibility for accidents that arise from the use of the instrument or products used other than as directed in this manual.

Official names for applications and the like used in this manual

| (Official name) |
|---|
| Microsoft [®] Windows [®] 7 Professional Operation System |
| Microsoft [®] Windows [®] 8 Pro Operating System |
| Microsoft [®] Windows [®] 8.1 Pro Operating System |
| Microsoft [®] Windows [®] 10 Pro Operating System |
| |

Trademarks

 Microsoft, Windows, Windows 7, Windows 8, Windows 8.1, and Windows 10 are registered trademarks of Microsoft Corporation in the United States and/or other countries.

Other company and product names included in this manual are trademarks or registered trademarks of their respective companies.

Safety Symbols

The following symbols are used in this manual and on the instrument to prevent accidents that may occur as result of incorrect use of the instrument.

Denotes a sentence regarding a safety warning or note. Read the sentence carefully to ensure safe and correct use.

Denotes a prohibited operation. The operation must never been performed.

Denotes an instruction. The instruction must be strictly adhered to.

Denotes a prohibited operation. Never disassemble the instrument.

Denotes an instruction. Always disconnect the AC adapter from the AC outlet.

This symbol indicates alternating current (AC).

This symbol indicates direct current (DC).

This symbol indicates class II protection against electric shock.

Safety Precautions

To ensure correct use of this instrument, read the following points carefully and adhere to them. After you have read this manual, keep it in a safe place where it can be referred to anytime a question arises.

| | WARNING (Failure to adhere to the following points may result in death or serious injury.) | | |
|---|---|--|--|
| \bigcirc | Do not use the instrument in places where flammable or combustible gases (gasoline, etc.) are present. Doing so may cause a fire. | | |
| Always use KONICA MINOLTA's optional accessory AC adapter (AC-A308) or USB bus power AC adapter (AC-A305J,K,L,M) connected to an AC outlet of the rated voltage and frequency 100-240 VAC (50/60 Hz). If an AC adapter other than those specified by KONICA MINOLTA is used, or if the adapter is connected to an unsupported voltage, it may result in damage to the adapter, fire, or electric shock. | | | |
| | If the instrument will not be used for a long time, disconnect the AC adapter power plug from the AC outlet. Accumulated dirt or water on the prongs of the AC adapter's plug may cause a fire and should be removed. Clean off any dirt or water on the prongs of the AC adapter's plug before use. | | |
| \bigcirc | Do not insert or disconnect the AC adapter with wet hands. Doing so may cause electric shock. | | |
| | Do not disassemble or modify the instrument or the AC adapter. Doing so may cause a fire or electric shock. | | |
| \bigcirc | The instrument should not be operated if it is or the AC adapter is damaged, or if smoke or o smells occur. Doing so may cause a fire. In such situations, turn the power OFF immediately disconnect the AC adapter power plug from the AC outlet (or remove the batteries if using battery power) and contact the nearest KONICA MINOLTA-authorized service facility. | | |
| \Diamond | Take special care not to allow liquid or metal objects to enter the instrument and the AC adapter. Doing so may cause a fire. Should liquid or metal objects enter the instrument, turn the power OFF immediately, disconnect the AC adapter power plug from the AC outlet (or remove the batteries if using battery power) and contact the nearest KONICA MINOLTA-authorized service facility. | | |
| \bigcirc | Do not forcibly bend, twist or pull the power cord. Do not place heavy objects on, or damage or modify the power cord. Doing so may damage the power cord and cause fire or electric shock. | | |
| 0 | Always disconnect the power cord by holding the power plug. Pulling the power cord itself may damage it and cause fire or electric shock. | | |
| 0 | Firmly push the AC adapter power plug completely into the outlet. If the power plug is not pushed completely in, it may cause a fire or electric shock. | | |
| \bigcirc | Do not dispose of the batteries in a fire or charge, short-circuit, heat, or disassemble the batteries. Doing so may cause the batteries to rupture or leak, which could result in fire or injury. | | |

Q

Do not look directly at the lamp. The lamp is extremely bright and emits ultraviolet rays. Doing so may injure the eyes.

| \triangle | CAUTION (Failure to adhere to the following points may result in injury or damage to the instrument or other property.) |
|-------------|--|
| | When using the AC adapter, provide an environment such that there is an outlet near the instrument and the power plug of the AC adapter can be easily plugged or unplugged. |
| 0 | Take care not to pinch yourself on the areas of the instrument that open and close. Doing so may result in injury. |
| \bigcirc | Do not use any batteries other than those specified for the instrument. Do not use a new battery and an old battery or batteries of different types together. When loading the batteries into the instrument, ensure they are oriented according to the polarity indication (positive + and negative -) on the instrument. Otherwise, the batteries may break or leak, resulting in a fire or injury, or contamination of the area. |
| \bigcirc | Do not use the instrument if the sample surface aperture (measurement area) is in the line of sight. Doing so may result in injury to the eye. |
| 0 | Take sufficient care when handling the target mask. The sample surface aperture plastic may become cracked, resulting in injury. |
| | When cleaning the instrument, unplug the AC adapter power plug from the outlet. Failure to do so may cause electric shock. |

Introduction

Thank you for purchasing this KONICA MINOLTA instrument.

This instrument is a lightweight, compact colorimeter for reflecting an object's color. It was developed to provide colorimetry for analyzing the baking condition of bread, pie crusts, and other baked goods.

In addition, when used with the included PC application, data saved in the instrument can be displayed in a list and saved to the PC.

Packing materials of the product

Be sure to keep all packing materials used for shipping the product (cardboard box, cushioning material, plastic bags, etc.).

This instrument is a precision measuring instrument. When transporting the instrument to a service facility for maintenance or for other reasons, be sure to use the packing materials to minimize shock or vibration. If the packing materials are lost or damaged, contact a KONICA MINOLTA-authorized service facility.

Notes on Use

Always use the instrument correctly. If the instrument is used in a manner not described in this instruction manual, it may cause injury, electrocution, or damage to the instrument itself.

Operating Environment

Use the instrument at an ambient temperature between 0°C and 40°C and a relative humidity of 85% or less (at 35°C) with no condensation. Be sure to use the instrument within this range.

- If the operating humidity range is exceeded, errors may occur for measurements of dark colors. Do not use it in areas of rapid temperature changes.
- Do not leave the instrument in direct sunlight or near heat sources such as a stove. Doing so may cause the internal temperature of the instrument to become much higher than the ambient temperature.
- Do not use the instrument in areas where dust, cigarette smoke, or chemical gases are present. Doing so may cause deterioration in performance or the instrument may malfunction.
- Do not use the instrument near equipment that produces a strong magnetic field (such as speakers).
- The instrument is a pollution level 2 product (equipment that may cause temporary electrical hazards due to contamination or condensation or products that are used in such an environment).
- Do not use the instrument at altitudes higher than 2,000 m.
- The optional AC adapter has been designed exclusively for indoor use. Do not shortcircuit the output plug. The AC adapter should never be used outdoors because rain or other factors may result in a risk of electric shock or fire.
- Mount the instrument securely on the tripod to prevent it falling over or dropping. Otherwise, injury or the damage of the instrument or surrounding objects may result.

Measurement

- When not using the instrument for a long period of time, blow off dirt or dust on the receptor window with a blower before use.
- Take care to prevent dust and the like from entering the opening on the instrument when using it upside down.

Target Mask

• Do not touch the inside of the target mask, allow the mask to get dirty, or scratch the mask.

White Calibration Cap

• Do not allow the white calibration area to become scratched or dirty, such as from fingerprints.

Power Source

- When the instrument is not being used, turn the power OFF.
- This instrument can be used with AA batteries (alkaline or nickel-metal hydride rechargeable batteries), with the AC adapter (AC-A308), or the USB bus power AC adapter (AC-A305J,K,L,M). These adapters cannot be used for charging the nickel-metal hydride rechargeable batteries in the instrument.
- Be sure to use only the AC adapter specified by KONICA MINOLTA and connect it to a 100-240 VAC (50/60 Hz) AC outlet. Use an AC power supply of the rated supply voltage (within ±10%).
- Do not connect the AC adapter to an overloaded electrical circuit. In addition, do not wrap or cover the AC adapter with cloth or other material while in use. Doing so may cause an electric shock or fire.

System

- Do not subject the instrument to strong impacts or vibrations. Doing so may cause deterioration in performance or the instrument may malfunction.
- Do not subject the sample surface aperture of the instrument to impact. When not in use, make sure to attach the cap.
- The instrument may cause interference if used near televisions, radios, etc.
- When the instrument is exposed to strong external static electricity, the LCD may go blank or the measurement result may not be displayed properly. If the instrument is communicating with an external device, the communication may also be interrupted. In such cases, turn the power OFF and then turn it ON again. If black smudges appear on the LCD, wait until they disappear naturally.
- When turning the power OFF and then ON again, wait several seconds after turning the power OFF.

Battery Backup

• The backup batteries are automatically charged when the instrument is operated, and at full charge the memory content will be saved for 34 months under normal conditions. In addition, the backup batteries will be fully charged after 27 hours if the instrument is powered using batteries, the AC adapter, or USB bus power, regardless of whether the instrument is turned ON/OFF. There is no need to worry about overcharging.

Introduction (Cont.)

• Even if the backup batteries are depleted, the various settings and saved data will be kept in the instrument. However, periodic backup of important data to another storage medium using the included software is recommended.

Notes

 Do not attempt to replace the backup battery by yourself. Contact a KONICA MINOLTAauthorized service facility instead.

Notes on Storage

- The instrument should be stored at a temperature between -20°C and 45°C with a relative humidity of 85% or less (at 35°C) and no condensation. Do not store the instrument in areas subject to high temperatures, high humidity, or sudden changes in temperature, or in areas where condensation may occur, as these circumstances may cause a malfunction. We recommended you store the instrument with a drying agent at a temperature around 20°C.
- Do not leave the instrument inside a car such as in the cabin or the trunk. Otherwise, the temperature and/or humidity may exceed the allowable range for storage during midsummer or midwinter, resulting in a malfunction.
- Keep the packing materials used for shipment and use them to transport the instrument. This material will protect the instrument from sudden changes in temperature and from vibration and shock.
- Do not store the instrument in areas where dust, cigarette smoke, or chemical gases are present. Doing so may cause deterioration in performance or the instrument may malfunction.
- Be sure to keep all packing materials (cardboard box, cushioning material, plastic bags, etc.). They can be used to protect the instrument during transportation to the service facility for maintenance (re-calibration, etc.).
- If the inside of the sample surface aperture is dirty or scratched, measurement will not be performed correctly. When the instrument is not in use, make sure to attach the protective cap before storing.
- Be sure to store the target mask where it will be protected from becoming scratched or exposed to dust.
- If the instrument will not be used for 2 weeks or more, remove the batteries. Otherwise, the batteries may leak and damage the instrument.
- When the white calibration cap is not being used, put on the dedicated lid, and store it in a location protected from external light.

Notes on Cleaning

- When the instrument is dirty, wipe it with a soft, clean dry cloth. Never use solvents such as thinner or benzene.
- If there is dust or dirt on the receptor window, use a blower to blow it off or gently wipe it with a soft, clean dry cloth. Never use solvents such as thinner or benzene. If you are unable to remove dirt from the instrument or if the instrument becomes scratched, contact a KONICA MINOLTA-authorized service facility.
- Contact a KONICA MINOLTA-authorized service facility if the inside of the target mask or the inside of the integrating sphere becomes dirty.
- Should the instrument break down, do not try to disassemble or repair it by yourself. Contact a KONICA MINOLTA-authorized service facility.
- <Target Mask>
- If the target mask becomes dirty, moisten a soft cloth with water, wring the cloth, and gently wipe off the dirt. After wiping off the dirt, clean the mask with ethanol.
- If the inside becomes dirty, blow off the dirt or dust using a blower.
- Do not touch the inside of the target mask or use a cloth to wipe off dust or dirt on the mask. If the target mask is dirty, and the dirt cannot be removed by a blower or the like, contact a KONICA MINOLTA-authorized service facility.
- When touching food products directly for measurement, pay extra attention to food safety and follow the directives for the specific country and municipality.
- <White Calibration Cap>
- If the white calibration area becomes dirty, gently wipe the dirt off using a soft cloth. If the dirt does not come off easily, wipe using a cloth soaked in commercial lens cleaner, and then wipe using a cloth soaked in water before drying.
- If areas other than the white calibration area become dirty, gently wipe the dirt off using a cloth soaked in water or soapy water. Never use solvents such as thinner or benzene.
- Take care so as not to scratch the white calibration area.

Disposal Method

- When disposing of the batteries used in this instrument, use tape or some other material to electrically insulate the contacts. Contact with other metals may cause the batteries to overheat, rupture, or catch fire.
- Make sure that the instrument, its accessories (and used batteries), and the packing materials are either disposed of or recycled correctly in accordance with local laws and regulations.

Chapter 4

Chapter 1

Before Using the Instrument

Checking the Included Accessories

This instrument can be used with the following standard accessories and optional accessories. Memo The shape of some products may be different from those shown.

Standard Accessories

Verify that all of the following items are included.

Target Mask

Approx. ø8 mm, w/ protective aperture plastic plate The target mask is used for aiming and correctly measuring a measurement location.

Memo This instrument comes shipped from the factory with the target mask already attached.

White Calibration Cap CR-A86

Used to perform white calibration.

Memo When not in use, put on the dedicated lid and store the cap.

USB Cable IF-A25

Used to connect the instrument to a PC. When using the USB bus power AC adapter, power will be supplied through the USB cable (IF-AF25).

Protective Cover CR-A91

This set prevents foreign contaminants from getting inside the instrument when used in locations prone to dust.

Wrist Strap CR-A73

Used to prevent users inadvertently dropping the instrument.

■ Protective Cap CR-A93

■ Soft Case CR-A98

Holds the instrument and the white calibration cap.

4 AA Batteries

Chapter 1

Before Using the Instrument

Optional Accessories

Purchase the following separately sold accessories as necessary.

AC Adapter AC-A308

The adapter is used to supply power from the AC power supply to the instrument. Input: 100-240 V \sim 50/60 Hz 25–38 VA Output: 8 V == 1.5 A Plug design: \oplus \bigcirc Center-negative

USB Bus Power AC Adapter

AC-A305J,K,L,M (UBX305) AC-A305J (North and South America, Taiwan and Japan) AC-A305K (China) AC-A305L (Korea) AC-A305M (Europe and Singapore) *Form differs according to region. Input: 100-240 V \sim 50/60 Hz 0.15A Output: 5 V = 1.5 A

Hard Case CR-A90

This case can be used to store the instrument together with its accessories.

* Do not use the case for transporting or shipping.

Chapter 1

Names and Functions of Parts

1. Measuring button

Press to calibrate or measure.

2. Operation keys

The keys are used to switch screens and to select, set, or save settings. See page 21 "Instrument Operation/Display" for details.

3. LCD screen

Displays settings, measurement results, messages, etc.

4. READY lamp (blue)

Displays the measurement ready status when charging of the emission circuit is complete.

5. STATUS lamp (orange)

Illuminates the lamp when measurement fails, when the xenon tube is burnt out, when operation cannot be performed, and for other error notifications.

6. Sample surface aperture

This is the aperture for measuring samples. The diameter of the opening can be changed by replacing the target mask.

7. Target mask

The target mask is used for aiming.

8. Tripod socket

9. Battery compartment cover

This is the cover for the battery compartment. Four AA batteries can be inserted into the battery compartment according to the polarity indications within.

10. Protective connector cover

Protects the AC adapter socket and USB connection terminal.

11. USB terminal

Used to connect the instrument to a PC or a printer (sold separately) when using the supplied USB cable (IF-A25).

12. AC adapter socket

Used to connect the AC adapter connector plug when using the optional AC adapter (AC-A308).

13. Strap holder

Used to attach the supplied wrist strap.

Memo See page 12, "Attaching the Wrist Strap", in this manual for how to attach the wrist strap.

14. Power button

Used to turn the power ON/OFF. The power can be switched ON/OFF by pressing and holding this button.

Handling the Instrument

Attaching the Wrist Strap

Notes

When using the instrument by hand, attach the wrist strap and pass your arm through the strap to prevent the unit from falling.

Procedure

Pass one end of the wrist strap through the strap holder on the instrument.

- **2** Pass the other end of the strap through the loop, and fold the end of the strap that was passed through the strap holder back through the loop as well.
- **O** Pass the end of the strap that was first passed through the loop through the buckle.

Memo When the strap is worn on the arm, move the loop as needed to tighten the strap as necessary.

12

Inserting Batteries

This instrument can be powered by four AA batteries (alkaline batteries or nickel-metal hydride rechargeable batteries). Use batteries as needed for the application.

- Do not use manganese batteries.
 - Remove the batteries if the instrument will not be used for at least 2 weeks. If the batteries are left in the instrument for long periods, the batteries may leak and damage the instrument.
 - Do not mix battery types or use a mixture of new batteries and used batteries. Doing so may cause the batteries to rupture or a decrease in battery life.
 - Do not touch or short-circuit the terminals in the battery compartment. Doing so may damage the instrument.

Procedure

Verify that the power has been turned OFF (LCD screen display is blank).

2 To open the battery compartment cover, slide the cover in the direction indicated by the arrow.

• To close the cover, insert the protrusions on the cover in to the holes on the battery compartment on the instrument, and then press the cover in until it clicks.

Powering from a PC

The included USB cable (IF-A25) can be used to connect the instrument to and power the instrument from a PC. Refer to "Connecting to a PC" on page 37 for details on connecting the instrument to a PC.

Connecting an AC Adapter

- When using AC power for the instrument, be sure to use the optional AC adapter (AC-A308) or the USB bus power AC adapter (AC-A305J,K,L,M). Notes
 - When connecting or disconnecting the plug, be sure to verify that the power has been turned OFF.

Be sure to connect the USB bus power AC adapter (AC-A305J,K,L,M) using the USB cable (IF-A25) supplied with the product.

Attaching/Removing the Target Mask

Notes

The following procedure explains how to attach or remove the target mask.

- Take care to prevent dust or the like from entering the integrating sphere from the sample surface aperture during operation.
- Do not touch the inside surface of the integrating sphere painted white, use a cloth to wipe off dust or dirt, or put anything inside.
- Do not apply excessive force to latch portion on the inside of the target mask. The target mask may become unusable if the latch portion is damaged.
- If the target mask is damaged, contact a KONICA MINOLTA-authorized service facility.

Attaching

- Apply the target mask so that the protrusions on the outer perimeter of the target mask are aligned with the starting point of the <u>mark</u> used for aligning the instrument.
- Hold the outer perimeter of the target mask, and rotate in the direction of the arrow (clockwise). Turn the target mask until the protrusion on the outer perimeter aligns with the | mark on the instrument and a clicking sound is heard. The target mask will be secured.

Removing

Hold the outer perimeter of the target mask, and rotate in the opposite direction of the arrow (counterclockwise) to remove the target mask. Rotate the mask until the protrusion on the outer perimeter reaches the starting point of the _____ mark used for aligning the instrument.

Hold the outer perimeter of the target mask to remove it.

White Calibration Cap CR-A86

The white calibration cap, constructed as shown below, is used for performing white calibration.

• When the white calibration cap is not being used, keep it away from external light and dust by putting on the dedicated lid and storing it.

Using the Cap

Placing

2

• Hold the instrument securely.

Place the white calibration cap with the white calibration area upward, and place the instrument on top so that the target mask fits over the white calibration area.

Notes Do not fix the white calibration cap to the instrument.

Removing

Remove the instrument from the white calibration cap, and attach the lid to the white calibration cap.

Chapter 1

Before Using the Instrument

How to Strage

When you put away the instrument in the soft case, please housed as shown in the figure.

Notes When the white calibration cap is not being used, put on the dedicated lid, please store it in a location protected from external light or dust.

Cleaning the Components

This section explains how to clean the target mask, the white calibration cap, and the inside of the integrating sphere.

Target mask

- If the target mask becomes dirty, moisten a soft cloth with water, wring the cloth, and gently wipe off the dirt. After wiping off the dirt, clean the mask with ethanol.
- If the inside becomes dirty, blow off the dirt or dust using a blower.
- Notes
 Do not touch the inside of the target mask or use a cloth to wipe off dust or dirt on the mask. If the target mask is dirty, and the dirt cannot be removed by a blower or the like, contact a KONICA MINOLTA-authorized service facility.
 - When touching food products directly for measurement, pay extra attention to food safety and follow the directives for the specific country and municipality.

White Calibration Cap

- If the white calibration area becomes dirty, gently wipe the dirt off using a soft cloth. If the dirt does not come off easily, wipe using a cloth soaked in commercial lens cleaner, and then wipe using a cloth soaked in water before drying.
- If areas other than the white calibration area become dirty, gently wipe the dirt off using a cloth soaked in water or soapy water. Never use solvents such as thinner or benzene.

Notes Take care so as not to scratch the white calibration area.

Inside the Integrating Sphere

Procedure

2

Remove the target mask.

• See page 15, "Attaching/Removing the Target Mask" for how to remove the target mask.

- Use a blower to blow off dust or dirt inside the integrating sphere.
- Notes Do not touch, use a cloth to wipe off dust or dirt, or put anything inside the integrating sphere. If the inside of the integrating sphere is dirty, and the dirt cannot be removed by a blower or the like, contact a KONICA MINOLTA-authorized service facility.

Before Using the Instrument

Turning the Power ON/OFF

Turning the Power ON Press and hold for about 1 O second. FP BEEP The display on the LCD screen will appear and the READY lamp will illuminate in blue. **Turning the Power OFF** 0 If the power is ON, press and hold POWER

The display on the LCD screen will disappear.

for about 1 second.

- Memo
- When shipped from the factory, the buzzer sound and READY lamp are set to ON.
- The buzzer sound when the power is turned ON or when measuring can be changed to OFF using the PC application settings for the instrument. For details, see "*Settings Only Configurable from the PC Application" under Other Settings on pages 50 to 51.

Power button $(\mathbf{0})$ Ø

Battery Warnings

This instrument can be powered by AA batteries (alkaline batteries or nickel-metal hydride rechargeable batteries).

When the instrument is operating on battery power, the battery mark will appear on the LCD screen showing one of two levels according to the battery consumption. The battery mark will not be shown if the batteries have sufficient power.

| Battery mark | Status | Description |
|--------------|--------------------------------|---|
| | Batteries are depleted | The system will fail if the batteries are not replaced immediately. (The power will turn OFF automatically 5 seconds after the "Low Battery" message appears.) |
| | Remaining battery power is low | If this mark is displayed, measurement can be continued temporarily, but new batteries should be installed as soon as possible. |
| None | Batteries are full | Shows that the remaining battery power is sufficient. |

Memo The display will not be shown when the power is OFF.

The display will not be shown when power is supplied through the AC adapter or USB bus power.

20

Points to Remember

When using the instrument with the supplied PC application, the instrument's settings can be configured, measurement can be performed, and measurement data can be viewed in a list and saved/cleared.

Instrument Operation/Display

The LCD screen on the top of the instrument is used to display measurement results and messages. The operation keys can be used for configuring various settings used for measuring, for switching displays, and for other useful functions.

AVERAGE button

Displays the average for the accumulated measurement data. Press and hold this button for at least 2 seconds to reset the accumulated data.

This key is used to switch between the <MENU> screen and the measurement screen, or to select an item.

| \bigcirc | or | \geq | key |

Chapter 2

Measurement

Notes Verify that the USB cable is connected or that there is sufficient battery power remaining before performing measurement.

CAUTION

To ensure correct measurement, take care to prevent the sample and the sample from slipping away from the sample surface aperture while pressing down the measuring button.

Flow of Measurement

Part 1. Measurement

Memo

Some settings can be configured on the instrument when turned ON in the settings of the supplied PC application. For more on these settings, read "Instrument Menu Customization" regarding the environment settings

for the instrument (Page 52).

White Calibration

10:00 00 BCU

This instrument requires white calibration before performing measurement after the power is turned ON.

Memo

Changes in ambient temperature and heat generated from repetitive use may cause subtle deviations in the indicated values. In such cases, perform white calibration regularly.

- Notes • Perform white calibration using the included White Calibration cap.
 - Perform white calibration under the same temperature conditions as when performing measurement.
 - Perform white calibration after the instrument has had time to adapt to the ambient temperature.
- When the buzzer is set to ON, the buzzer will emit a sound during measurement. Memo The following explanations assume that the buzzer sound has been set to ON.

Turn the instrument power ON.

Memo

Place the instrument on the white calibration cap.

- See page 16 for how to use the white calibration cap.
- · When performing white calibration, confirm that the instrument and white calibration Cap have the same paring number (See page 22).

Press the measuring button.

Веер

White calibration will be performed, and the measurement screen will be displayed.

- Memo Remove the instrument from the white calibration cap. Put the dedicated lid on the white calibration cap, and store the cap in the storage case.
- Memo When a calibration error occurs, the buzzer will beep three times on the third try, and "Calibration Error" will be displayed. Click the MENU/OK button, check that the white calibration cap is correctly attached and that tit has the same pairing number as the instrument, and perform white calibration again.

Perform measurement to continue.

Measurement

Notes

Avg. Meas.

..

Using the average measurement function makes it possible to obtain data that is even more accurate.

If the sample color is uneven, the accuracy of the measurement can be improved by randomly measuring locations within the sample area to calculate the average for the sample, or by repeatedly measuring the same sample location to calculate the average for that location.

Notes

After an average is determined for the instrument, because the average is converted for each color space and displayed, the simple averages for measurements of each count may not match.

<Average>

Calculation Methods

BCU (Baking Contrast Units)

"O" will be displayed when BCU value is less than zero (BCU \leq 0).

Average of BCU

The averages of the measured tristimulus values X, Y, and Z of specimens are calculated and the BCU value is calculated from the average Y value.

Average of L*a*b*

The averages of the measured tristimulus values X, Y, and Z of specimens are calculated and the $L^*a^*b^*$ values are calculated from the average tristimulus values.

Maximum or minimum value of L*a*b*

The maximum or minimum of the measured tristimulus value Y is found and the L*a*b* values are calculated using the X, Y, and Z values for the measurement corresponding to the maximum or minimum Y value.

PC Application

Notes on Use

- This software is application software for use with Windows 7, Windows 8, Windows 8.1, or Windows 10. Please note that this software does not include any OS.
- One of the above OS must be installed on the PC in order to install this software.
- Refer to page 72 for PC system requirements.

Connecting to a PC

This instrument is equipped with a USB connection terminal.

The included USB cable (IF-A25) can be used to connect the instrument to a PC and transmit data as well as to allow the instrument to be controlled or configured from a PC application.

- Do not connect any cable other than the designated cable to the USB connection terminal.
- When connected via USB and communicating, communications may be interrupted by being exposed to strong external static electricity or radio waves from the surrounding area. In such cases, turn the power OFF and then turn it ON again.
- Firmly connect the USB connector plug in the correct orientation.
- Always connect and disconnect the USB cable by the connector's plug. Do not pull it out by the cable itself or bend it with unreasonable force. Doing so may break the cable.
- Connect the instrument using a cable with a suitable length. If the cable is not of a suitable length, connection problems may arise or the cable may break.
- Firmly push in the USB cable connector that matches the shape of the port (connection terminal) until it can go in no further.
- With Windows 8.1 or 10, if the instrument can only be operated using USB Feed, set "USB selective suspend setting" under Power Options to "Disabled".
- Memo The USB communication port on the instrument is USB 2.0-compliant.

Connecting to/Disconnecting from a PC

Connecting to a PC

Operating Procedure

8

Connect the Micro-B connector of the USB cable to the USB connection terminal on the instrument.

Firmly push it in until it can go no further and verify that it is securely connected.

MENU/OK Press , move the selection frame to "USB Connec." MENU/OK using either or , and then press .

Connecting to a PC (Cont.)

| 9 | Move the selection frame to "PC" using either or |
|---|--|
| | \bigtriangledown , and then press \bigcirc . |

"Connecting to PC" will be displayed on the instrument.

- Memo Pressing the MENU/OK key while "Connecting to PC" is displayed on the screen will cause the instrument to be disconnected from the PC.
 - Connect the A connector of the USB cable to the USB port on the PC.

After connecting to the PC, the instrument will be recognized as a mass storage device, and an AutoPlay dialog box will be displayed.

Memo If the instrument is not recognized as a mass storage device, disconnect and reconnect the cable, and start the procedure over again from step 2.

When First Connecting to the PC

- Notes To use a PC application with the instrument connected to a PC, the dedicated USB driver must be installed.
 - If the PC being used is connected to the Internet, the Windows updater will be used to automatically install the drivers.
 - Installation may take several minutes.
 - Once installation is complete, a COM port will be assigned to the instrument.
 - If the PC's operating system is Windows 10, the USB driver will be installed automatically when the first time the instrument is connected to the PC.

If the PC is not connected to the Internet, manually install the drivers by accessing the APP folder in the instrument's mass storage folder.

Checking the connection status (COM port number) [Windows 7]

Navigate to [Start menu] \rightarrow [Computer] (right-click) \rightarrow [Properties] \rightarrow [Device Manager] \rightarrow [Ports (COM & LPT)].

⇒ Measuring Instruments(COM**): The COM port number assigned to the instrument will be displayed for "**".

[Windows 8]

Move the mouse to the lower left of the screen, right-click on the displayed window, and navigate to [Device Manager] \rightarrow [Ports (COM & LPT)].

⇒ Measuring Instruments(COM**): The COM port number assigned to the instrument will be displayed for "**".

[Windows 8.1, Windows 10]

Right-click on the Start button in the lower-left corner of the screen, and navigate to [Device Manager] \rightarrow [Ports (COM & LPT)].

⇒ Measuring Instruments(COM**): The COM port number assigned to the instrument will be displayed for "**".

"USB Serial Device(COM**)" may be displayed when using Windows 10. Regardless of the PC's OS, if the connected instrument is not displayed under [Ports (COM & LPT)] and is instead displayed as an "Unknown device" with an "!" mark, follow the procedure under "Updating the drive manually".

2 Updating the drive manually

If the connected instrument is not displayed under [Ports (COM & LPT)] and is instead displayed under [Other Devices] as "! Unknown Device", the USB driver will need to be installed manually.

- Device Manager

Disconnecting from a PC

2-2 Select [Update Driver Software], and click "Locate and install driver software manually."

2-3 Specify the APP folder in the instrument's mass storage folder as the save destination, and click "Next".

> Click "Install" on the confirmation screen with the message that reads, "Would you like to install this device software?"

Connecting to a PC (Cont.)

Launching the PC Application

Memo

The PC application cannot be run when logged in to the PC under a "Guest" account.

Notes [Windows8/8.1/10]

When starting the PC application, if ".NET Framework 3.5" is requested, follow the procedure below to configure the settings.

(Procedure)

Under [Control Panel] → [Programs and Features], select "Turn Windows features on or off".

In the Windows Features window, check the box next to ".NET Framework 3.5" and click "OK". Follow the displayed procedure to install.

BC10P (L:)

If this installation is not completed properly, be sure to verify that Windows Update works as it should.

- When connecting to a PC, an AutoPlay dialog will be displayed. Click "Open folder to view files"
- Notes Writing to the instrument memory is not permitted. Note that even if files are moved they will not be saved to the instrument.

Date/Time

- Configure as necessary -

This setting is only displayed and usable when the "Save to Instrument" setting for saved data is turned ON using the PC application.

When the PC application is running, the date and time is obtained from the instrument and displayed on the PC application screen.

The PC's date and time can also be set as the instrument's date and time.

Memo The time cannot be changed by inputting values on the PC application screen.

Go to the "Setting" screen.

र्ें Setting

Select "Get Instrument Date", and press the \circlearrowright button.

The date and time information (yyyy/mm/dd hh:mm:ss) will be obtained from the instrument and reflected in the date (yyyy/mm/dd) and time (hh:mm:ss) displays. Display format: yyyy/mm/dd (The date is displayed in year/month/day order.)

Select "Set PC Date to Instr.", and then click **U**.

The date (yyyy/mm/dd) and time (hh:mm:ss) will be obtained from the PC and set to the instrument.

Display format: hh:mm

(The time is displayed in hour:minute order.)

Chapter 3

PC Application

PC Application (Measurement)

<Remote Measurement and Trigger Measurement

When the PC application for the instrument is running, measurement can be done remotely or by using a trigger.

■ Remote Measurement

Click the measuring button on the PC application to measure remotely.

Trigger Measurement

When the PC application is running, press the measuring button on the instrument to perform measurement.

- * Check the box for "Use Measure Button on Inst."
- Notes When trigger measurement has been configured, it is not possible to change tabs or measurement conditions.

White Calibration

This instrument requires white calibration before performing measurement after the power is turned ON. After turning the power ON, if the instrument is immediately connected to the PC without performing white calibration, the PC application will enter white calibration measurement mode. Perform white calibration before beginning measurement.

Notes

- Changes in ambient temperature and heat generated from repetitive use may cause subtle deviations in the indicated values. In such cases, perform white calibration regularly.
- Perform white calibration under the same temperature conditions as when performing measurement.
- Perform white calibration after the instrument has had time to adapt to the ambient temperature.

Place the instrument on the white calibration cap.

- Memo See page 16 for how to use the white calibration cap.
 - In the PC application's [Measure] tab, click "White Cal.".
 - ♥ White Cal. < Beep < Beep < Beep
- Memo At this time, "Use Measure Button on Inst." will be disabled and white calibration from the instrument will not be possible.
 - White calibration will be performed, and the measurement screen will be displayed.
- Memo When a calibration error occurs, the buzzer will beep three times on the third try, and "Calibration Error" will be displayed. Click the MENU/OK button, check that the white calibration cap is correctly attached, and perform white calibration again.

<When a calibration error occurs>

Remove the instrument from the white calibration cap.

- Memo See page 16 for how to remove the cap.
 - Put the dedicated lid on the white calibration cap when storing.
 - Perform measurement to continue.

Measurement

Measurement

3

Make sure to perform white calibration before measuring. For details, refer to "White Calibration" on page 27.

- For accurate measurements, measure under the same conditions (ambient temperature, etc.).
- Press the [Measure] tab to open the measurement screen.
- Set the sample surface aperture on the sample to measure.

- [When measuring remotely] Α
- a-1 Click "Measure" on the PC application.

The measurement results will be displayed in the [Latest Meas.] tab on the PC application.

When changing the display format of the instrument's LCD screen with trigger Memo measurement, check the box for "Use Measure Button on Inst." and click the radial beside the display format to use.

- [When measuring using a trigger] B
- b-1 Check the box for "Use Measure Button on Inst."
- b-2 Press the measurement button on the instrument.

The measurement results will be displayed on the instrument and in the [Latest Meas.] tab on the PC application.

Continuously perform measurement in the same way to measure consecutively. To perform the most recent measurement again, click the "Ω Undo" key.

Avg. Meas.

Using the average measurement function when measuring makes it possible to obtain data that is even more accurate.

If the sample color is uneven, the accuracy of the measurement can be improved by randomly measuring locations within the sample area to calculate the average for the sample, or by repeatedly measuring the same sample location to calculate the average for that location.

After an average is determined for the instrument, because the average is converted for each color space and displayed, the simple averages for measurements of each count may not match.

Measure repeatedly until the desired measurement count is reached.

Memo To perform the measurement again during average measurement, click "O Undo".

Averaging can be performed for data from up to 16 measurements. Notes After 16 measurements, averaging will be performed for the 16 most recent measurements.

Display the measurement results.

The minimum and maximum BCU values from the conducted measurements will be displayed in the [Measure] tab along with the most recent measurement results.

In addition, the average will be automatically calculated from the number of performed measurements and displayed.

3 Reset the average.

Click "Avg. Reset".

Continuing with measurement will start the measurement count from "01".

Notes

Save Meas. Data

Data and averages measured using remote measurement or trigger measurement through the PC application can be saved to the PC.

For this setting, make sure to copy the PC application to the PC's hard drive before running the application.

1

Under "Save Meas. Data" in the [Measure] tab, click \bigcirc to the left of PC. The "Browse For Folder" window will appear.

Select the save destination and Click [OK].

Measurements performed remotely or using triggers will be collected and saved as a .csv file in the folder specified as the save destination. Save destination folder: Specified folder – "Serial No" folder

- yyyymmdd (measurement date) folder

File name: numbered according to measurement order

Example: 132648.csv (measurement hhmmss)

Memo To change the save destination, click the [🗀] mark to open the "Browse For Folder" window.

[When saving averages to the PC]

Click "Save Avg.".

The displayed averages will be saved to the destination selected in 2. File name

Example: 132648_A.csv (measurement hhmmss)

Importing Measurement Data

All data saved in the instrument is referenced and displayed in a list.

- Memo This operation is only possible when the "Save to Instrument" setting is turned ON in the PC application and there is saved data in the instrument.
- Notes Data acquisition may take longer when the number of data entries is large. Perform this operation when time permits.
- **1** In the [Data] tab, click "Read". Once the data has been transferred to the PC application, a window with the message "Data transfer complete." will be displayed.

Click [OK] to confirm.

2

Imported data will be displayed in the Target List and the Meas. Result List according to the date and time of measurement.

Measurement Data Operations

Save to PC (Obtain Measurement Data Saved in Instrument)

Import data saved in the instrument to a specified destination.

3

For this setting, make sure to copy the PC application to the PC's hard drive before running the application.

Click "Save to PC".

 In the "Browse For Folder" window, click
 the save location for the data to select it, and click "OK".

The data will be saved.

- Also note that data saved to the instrument can be copied directly from within the instrument's mass storage folder.
- Memo Exit the PC application if it is running.
 - 1. Connect the instrument to a PC. An AutoPlay dialog will be displayed. Click "Open folder to view file."
 - Click the DATA folder. Folders for each measurement date are created, and measurement data (******.csv) and averages (******_A.csv) are saved within. Select the required data, and copy to the PC.

Chapter 4

Other Functions

Connecting a Printer

Connecting a Printer

The instrument can be connected to the accessory printer so that the data displayed on the instrument's LCD screen can be printed. For information on connectable printers, contact a KONICA MINOLTA-authorized service facility.

- Memo Only text can be output to the printer.
 - The USB communication port on the instrument is USB 2.0-compliant.
- Notes
- Firmly push in the USB cable connector that matches the shape of the port (connection terminal) until it can go in no further.
- Make sure the power to both the instrument and the printer is turned OFF before connecting or disconnecting.
- Disconnect the connection cord only by the plug or by holding the connector. Also, do not pull the cord itself or bend it with unreasonable force.
- Do not touch the terminal portion of the connector, get the terminals wet, or subject the terminals to unreasonable force.
- Use a cord with a suitable length. If the cable is not of a suitable length, connection problems may arise or the cable may break.
- · The instrument has one USB connection terminal. Connecting to both a PC and a printer at the same time is not possible. When connected to a printer, make sure the instrument is connected to the AC adapter or has batteries.

Operating Procedure

Turn the instrument power OFF.

2

6

4

6

6

Open the connector's protective cover, and connect the USB cable to the USB port on the instrument. Connect the Micro-A connector of the USB cable to the USB connection terminal on the instrument.

>Disconnect PC Printer

• Firmly push it in until it can go no further and verify that it is securely connected.

Connecting a Printer (Cont.)

Printing Measurement Data

This function can be used to print measurement data. The instrument must be connected to the printer in advance. See page 63 "Connecting a

Printer" for details on connecting the instrument to a printer.

Notes

3

Print Sample

- Printing is not possible if the connection is not correct.
- Do not disconnect the cable while printing. Failure to do so may cause a malfunction.

Setting Procedure

- Connect the instrument to the printer and enable communication.
- Press ∪ "Back" from the <MENU> screen to go to the measurement screen.

| 6 | 46 | 10:00 |
|-----|-----|-------|
| | 01 | |
| BCU | 3 | 70 |
| * | · · | |
| L | 6 | 8.8 |
| a* | - | 7_4 |
| - | | .4 |
| b* | 29 |)3 |
| | _ | .0 |

Perform measurement.

• The measurement results will be displayed on the instrument's LCD screen and at the same time the printer will begin printing.

Disconnecting from the Printer

- Disconnect the printer from the instrument.
 MENU/OK
 Press , move the selection frame to "USB Connec." using either or , and then press MENU/OK
 Or , and then press .

 3 Move the selection frame to "Disconnect" using either MENU/OK

 or , and then press .
- Click ⁽⁾ "Back" to go back to the <MENU> screen.

Troubleshooting

Memory Errors

66

The following may occur if the cable connecting the instrument to the PC is disconnected.

- · It may become impossible to save files to the instrument.
- · Files saved on the instrument may become unreadable.

Data recovery can be performed if such memory errors occur.

Notes

After a memory error occurs, the data will be recovered. Although measurement is possible, the measurement data cannot be saved to the instrument.

Recover may take several minutes. During the recovery process, all operations will be prohibited.

When not performing recovery

| N | 0 | tα | C |
|-----|---|----|---|
| 1.1 | U | ιu | 0 |

Only measurement will be possible if recovery is not performed. When an error occurs, measurement data cannot be saved even if "Save to Instrument" is set. An error message will be displayed every time the power is turned on until system recovery is performed.

| 1 | Select "No" and confirm. |
|---|--------------------------|
| | MENU/OK |
| | <>> or |

MENU/OK

Measurement can be performed, but data cannot be

saved to the instrument.

OK

Error Messages

The messages below may be displayed when using the instrument. When one of these messages is displayed, please take the action indicated below. After performing the action, if the instrument does not return to normal, contact a KONICA MINOLTA-authorized service facility.

| Error Messages | | Condition / Assumed Factor | Action | |
|--|---|---|--|--|
| Instrument | PC application | Condition / Assumed Factor | Action | |
| Measurement Error: Output not reaching min threshold? The sample is too dark. | The sample's reflectance is below the measure limit. | This message is displayed if the sample's reflectance is low or if the amount of light from the sample is too low. | Samples with too low of a reflectance (L* < 1.0) cannot be measured. | |
| Measurement Error: Retention? Measure again. | Instrument retention is unstable? Secure the mask by pressing it against the measured object, and perform measurement again. | This message is displayed when measurement was not performed correctly, such as when external light enters the measurement area during measurement. | Perform measurement again while making sure not to move the instrument until the measurement results are displayed. | |
| Measurement Error Turn the power off and back on. | Control Error: Turn the power off and back on. | The circuit is faulty. Charging circuit A/D conversion circuit Measurement circuit | Turn instrument off and back on. If the situation does not improve, contact a KONICA MINOLTA-authorized service facility. | |
| Measurement Error: Flash Service is required. | Measurement Error: Flash No flash is being emitted. Service is required. | The xenon tube is burnt out. | Contact a KONICA MINOLTA-authorized service facility. | |
| Target Mask Detection Error Correctly attach a target mask. | No target mask found. Attach a target mask. | Attachment of a target mask cannot be detected.No target mask is attached.The target mask is not attached in the correct fixed position. | When measuring, be sure to attach a target mask. Refer to page 15 for how to correctly attach the target mask. | |
| Calibration Error Please re-calibrate. | White Calibration Error Perform calibration using the white calibration cap. Is the white calibration surface dirty? Are you using the supplied white calibration cap? | White calibration was not performed in the correct procedure. | Use the white calibration cap included with the instrument. Before beginning, make sure the white calibration area is not dirty. When calibrating, make sure the sample surface aperture and the white calibration area are close together. If the situation does not improve, contact a KONICA MINOLTA-authorized service facility. | |
| Low Battery Replace the battery. | | (When using the instrument on battery power)Batteries are low on power. | Insert new batteries, or use the AC adapter. | |
| Printers cannot be connected when the unit is powered via USB. Use the AC adapter or batteries. | | Because switching to the printer connection setting when the instrument is powered by a PC or the USB–AC adapter will cause the power supply to be stopped, which may damage the memory, this setting cannot be changed. | When connecting the instrument to a printer, make sure to connect the instrument to the printer using a USB cable, and make sure the instrument is being powered through the AC adapter or by batteries. | |
| The memory is full. Delete unnecessary data. | The memory is full. To gain measurement memory space, please delete any unnecessary measurement data. | Even if the setting for saving measurement data to the instrument is set to ON, data cannot be saved because the number of saved data entries will exceed 1000 entries upon the next measurement. | Use the PC application to delete unnecessary data saved to the instrument. Refer to page 60 for the operating procedure. | |
| Memory Error Recover memory? Time required: approx. 10 min. | Memory Error Perform memory recovery? The process will take about 10 minutes. Do not turn the power off during that time. | Some data saved in the instrument may be corrupt, which is preventing the data from being accessed properly. | Refer to page 66 for details. If the situation does not improve, contact a KONICA MINOLTA-authorized service facility. | |
| Date and Time Setting Error Please re-set the time. | | This message is displayed if the instrument has not been connected to the power source for a long period of time and the backup battery has died, causing the built-in clock to stop. | After setting the time, leave the instrument connected to a power source in order to charge the backup battery. (Charging will be performed even if the instrument is OFF.) Refer to page 4 for details. | |

Chapter 5

In the event that of a malfunction with the instrument, carry out the following measures. If the instrument does not return to normal, try turning the power OFF. If this does not work, contact the nearest KONICA MINOLTA-authorized service facility.

| | Condition | Cause | Action |
|---|---|---|--|
| 1 | No display appears on the | Are batteries inserted? Alternatively, is the AC adapter connected? | Insert batteries. Alternatively, use the AC adapter. |
| | LCD screen. | Are the batteries dead? | Replace the batteries. |
| | | Are the batteries inserted with the correct orientation? | Insert the batteries with the correct orientation. |
| 2 | Measuring button operations are not being | Is the light source for measurement (pulse xenon lamp) charging? | After charging completes, make sure the READY lamp is illuminating, and then push the button. |
| | accepted. | Is the settings screen displayed? | Click the button from the measurement screen. |
| 3 | Key operations are not being accepted. | Is the instrument connected to the PC application? | When connected to the PC application, only MENU/OK key operations and power button operations will be recognized. Finish connecting to the PC application. |
| 4 | Connection to the PC application cannot be established. | Is "Connecting to PC" displayed for the USB setting on the instrument? | Turn the instrument on, and select "PC" under "USB Connec." on the settings screen to allow the instrument to be connected to the PC. |
| | | Are the instrument and the PC connected using a USB cable for connecting to a PC? | Connect the instrument to the PC using the USB cable supplied with the instrument. |
| | | Are 2 or more instruments connected to the PC? | The PC application supplied with the BC-10 Plus can only be used when connected to one instrument. Connect only 1 instrument to the PC. |
| 5 | The LEDs do not illuminate. | Is the LED setting set to "Off"? | Connect to the PC application and check the settings. |
| | | Connect to the PC application and check the settings. | |
| 7 | Printing is not possible. | Is "Printer" displayed for the USB setting on the instrument? | Turn the instrument on, and select "Printer" under "USB Connec." on the settings screen to allow the instrument to be connected to the printer. |
| | | Are the instrument and the printer connected using the USB cable for the printer? | Connect the instrument to the printer using the USB cable supplied with the printer. |
| | | Is the printer turned ON? | Turn on the printer before connecting to the instrument. |
| | | Was the USB cable disconnected once while connection to the printer was being established and then reconnected? | If the USB cable was disconnected while the connection was being established, communication between the instrument and the printer may not function properly. Turn the printer OFF once, and reconnect the printer from the first step. |
| 8 | Measurement results are not normal. | Is the instrument perpendicular to the measurement sample surface? | When measuring, make sure the instrument is perpendicular to the surface so that no light escapes. |
| | | Was the instrument moved during measurement? | Do not move the instrument when measuring. |
| | | Are the temperature and humidity of the measurement environment appropriate? | Be sure to use the instrument within the operating temperature and humidity range. |
