

KONICA MINOLTA

Color Data Software

SpectraMagic NX2

Pro version

Lite version

Color QC App

Configuration Tool

Instrument Check App

Easy to use / Streamlines workflow / QC software used in fields around the world

The Standard in Measuring Color & Light

Giving Shape to Ideas

Color Data Software SpectraMagic NX2

Redesigned user interface

Long-awaited software with enhanced QC functions

SpectraMagic NX2 consists of three apps

Color QC App
Connect measuring instruments and easily perform advanced color quality control

Instrument Check App
Easily check the condition of the measuring instrument

Configuration Tool
Measuring instruments can be configured all at once

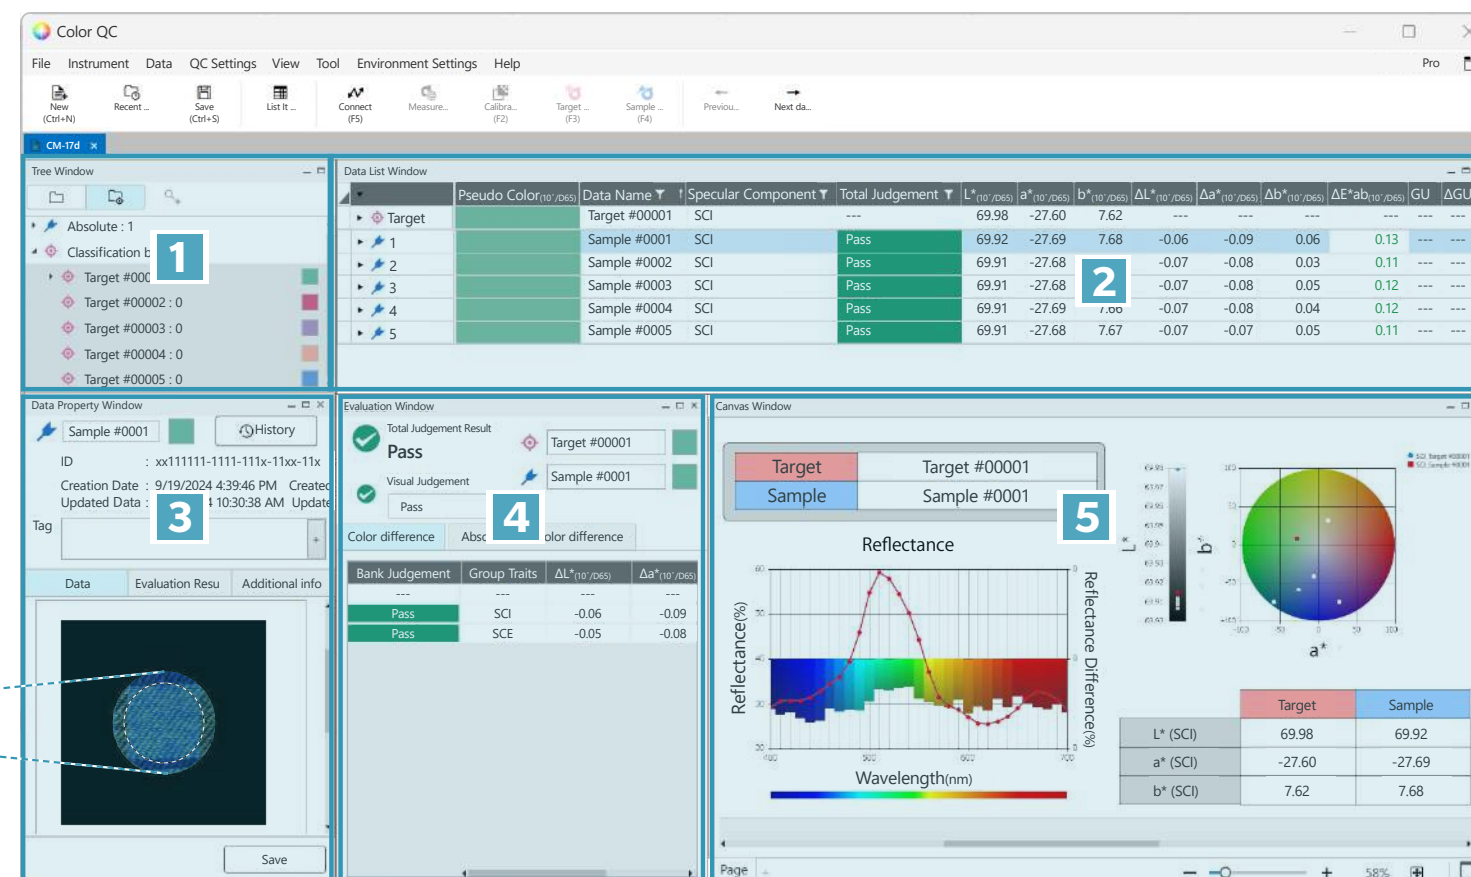

The software's main function, "Color QC App" can display various screens such as pass/fail judgement, color analysis, and process management by connecting spectrophotometers or colorimeters to the computer and measuring sample data.

Electronic viewfinder function

Check the measured value on the PC screen
*When a compatible model is connected

Measurement sample

Display and edit according to purpose

Screens that users have arranged and edited can be saved as templates.

Objects such as measurement data and graphs can be copied directly to Excel® for easy data management and report creation.

1 Tree Window

Shows document measurements organized into absolute and target measurements.

2 Data List Window

Shows the measurement data for the selected branch in the Tree Window.

3 Data Property Window

Shows the data properties for the selected sample.

4 Evaluation Window

Shows the evaluation results and measurement data for the selected sample.

5 Canvas Window

An area in which various graphic elements such as spectral graphs, data tables, etc. can be placed.

Easy-to-understand quality evaluation results

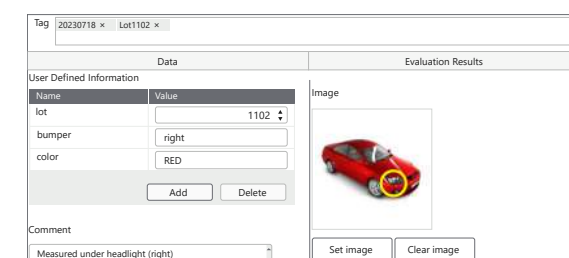

Improved operability of detailed settings

It is possible to set measurement conditions for standards and samples all at once.

The design of the system allows users to quickly grasp information, preventing operators from making errors in judgment and contributing to more efficient workflow.

Easy organization of large volumes of data

Classification by tabs (Tree Window)

Ex.) Grouping by tag "20230718"

Information can be easily organized by adding tags, comments, images, etc. to each data.

Supports advanced classification with user-defined information

Examples of using User Defined Information : There are three value types to choose from (numeric/string/list).

① Numeric

Name	Value
Lot Number	1111

[Example]
• Lot number
• Control number

② String

Name	Value
Operator	Konica Minolta

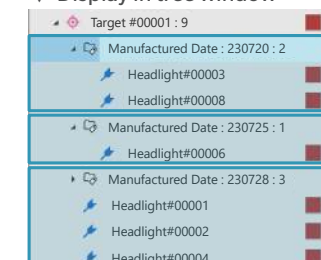

[Example]
• Worker name
• Sample name
• Creation date

③ List

Name	Value
Measurement part	Top Bottom

[Example]
• Customer name
• Measurement point
• Production line

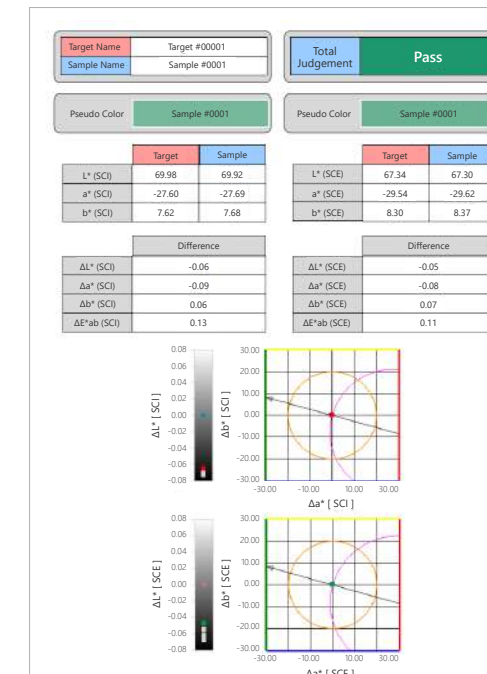

Display in tree window

POINT
Multiple subgroups can be displayed within a group by using user-defined information

User-defined information (Pro version only) is additional information for classifying measurement data in detail. Measured data can be quickly identified by setting this information in advance.

Original report creation function

The print screen allows you to freely arrange objects to create your own layout.

Full range of functions in Color QC App

Enables consistent color management across factories

Brand owners/managers can use QC templates (Pro version only) to standardize workflows and streamline inspection tasks. By setting measurement types, multiple color tolerances, and display layout, the operator does not need to configure the settings in advance, which helps preventing errors.

<Differences between two types of templates>
Display Templates : Only display layouts and list items can be saved.
QC Templates : In addition to display templates, you can save target data and tolerance settings, target and sample measurement conditions, display layout, instrument settings, etc.

Data comparison under multiple observation conditions (Observer/Illuminant) is possible

Data Name	L* (10°/D65)	L* (10°/LED-B3)	L* (10°/USER2)
Target #00001	69.98	68.41	69.42

LEFT : D65
CENTER : LED-B3
RIGHT : Light source in real environment captured by CL-500A

Data Name	Pseudo Color (10°/D65)	Pseudo Color (10°/LED-B3)	Pseudo Color (10°/USER2)
Target #00001			

In the data list window, you can set indexes according to various standards and color space. The increased number of configurable items means that it is no longer necessary to switch settings for each measurement, and it is possible to display and evaluate under multiple observation conditions (Observer/Illuminant) at the same time. (There is no limit to the number of light sources.) In addition to improving work efficiency, it also makes it easier to evaluate how colors appear under various environments.

Now possible to evaluate LED illuminants!

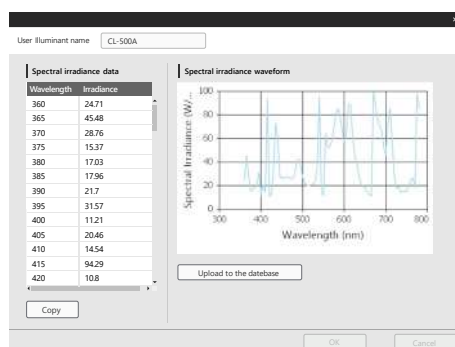

Usage example:
Acquiring measurement data based on visual perception in a room using LED lamps

LED illuminants

LED-B1 LED-B2 LED-B3 LED-B4 LED-B5
LED-BH1 LED-RGB1 LED-V1 LED-V2

Evaluation using user light sources of real environments is also possible

Now you can import data from Illuminance Spectrophotometer CL-500A!

By connecting CL-500A (optional), you can import light source information of the actual environment during measurement in order to quantify colors that are closer to what the human eye sees and in the field. Up to 100 user light sources can be registered.

Example of use : Evaluating how car body colors appear under various lighting conditions in a car showroom

(1) Measure the spectral irradiance data of the actual light source with CL-500A

(2) Import the light source data from (1) into SpectraMagic NX2

(3) Color evaluation is possible by selecting the environmental condition of (1)

Ver. 1.4 or later

Instrument Check App

★ The new application "Instrument Check App" can be used for free for 1 year after purchase! *

* Premium license (Listed on page 6) is required for continuous use.

Supports instrument check cycles Alerts prevent forgetting inspections

Monitor the status of measuring instruments Inspection information is linked to the Color QC App

CM-17d	Serial No. 99999999	✓
CM-16d	Serial No. 99999999	✓
CM-26dG	Serial No. 99999999	!
CM-36dG	Serial No. 99999999	!

Understand results and trends with reports and graphs

Maintain the performance of the instrument in combination with periodic calibration

The condition of measuring instruments can be easily checked and monitored. By comparing measured results with past data, you can understand performance fluctuations and prevent problems during use.

<Three indicators>

- Repeatability: Evaluates the short-term repeatability by using the white calibration plate and the gloss plate. It shows changes in the variability of measurement data.
- Reproducibility: Evaluates color differences by remeasuring a reference sample. Allows monitoring of long-term variations in measurement data.
- Light source output: Evaluates the amount of variation in light source light intensity from the shipment of the instrument (or from the completion of calibration service).

- After periodic calibration at a Konica Minolta-authorized service factory, this application can monitor the measuring instruments to ensure high accuracy until the next periodic calibration.
- The report function can also be used as a tool for efficient supply chain management.

Periodic calibration: In addition to inspection and calibration of the equipment, cleaning and replacement of parts according to their condition is performed. To maintain the accuracy of the instruments, we recommend a combination of daily inspections using this application and periodic calibration.

1 Tabular format

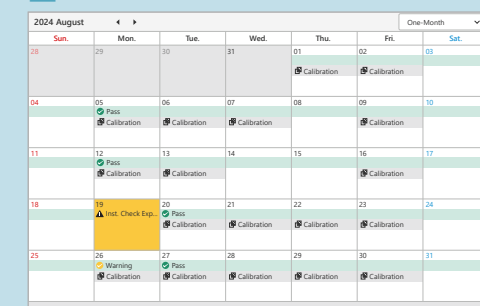

Date Time	Action	Result	Light Source	Color	Gloss
9/4/2024 10:20:19 AM	Instrument	Pass	Repeatability	Repeatability	Repeatability

Instrument Check Report	
Issue Date: 10/4/2024 2:50:11 PM +09:00	Issued By: Administrator
Compared Name: Instrument Check Date: 10/4/2024 2:48:14 PM +09:00	Inspected By: Administrator
Model: CM-17d	Serial No.: 10001000
Test Results	
Test Results	Pass
Light Source Test	Light Source Level: 100 %
Repeatability Test	Repeatability: 0.001
Reproducibility Test	Reproducibility: 0.001

For reproducibility evaluation, we recommend using the green tile for control

It is also possible to select an optional color plate (14 colors in total) that is close to the actual evaluation sample, or a sample that the customer owns.

Recommended for:

- Those who carry out periodical inspections and calibrations every year.
- Those who need to manage the history of instrument inspections, calibrations, etc. in ISO quality management.
- Those who need PQ (Performance Qualification).

Configuration Tool CM-CT1

Convenient setting software is integrated into this package

The CM-CT1 gives manufacturers the means for easily and quickly setting up their spectrophotometers. Moreover, when multiple devices are used or when the same conditions need to be set amongst multiple factories or suppliers, settings can be compiled into a file and shared.

Setting of User Index*¹ has been added.

*1: Settings can be made when CM-17d/16d, CM-26dG/26d/25d, CM-25cG or CM-5/CR-5 is connected.
The feature is only available when SpectraMagic NX2 dongle is plugged into the PC or a dongleless license is activated.

Instrument Settings

CM-CT1 allows various instrument settings, such as measurement conditions, instrument display contents, user-based instrument operation restrictions, WLAN/Bluetooth® settings, etc. to be set using a computer. The software also allows setting contents to be exported to a file which can then be applied to multiple spectrophotometers.

Export Data

Data saved to a spectrophotometer (spectral reflectance data, plus gloss data for CM-26dG or CM-25cG) can be saved to a CSV file.

Calibration Data Settings

When purchasing a new white calibration plate or gloss calibration plate, the calibration plate data must be set in the instrument before measurement can be performed.

Remote Control

While displaying the LCD screen of the spectrophotometer* on a computer in real time, CM-CT1 enables control equivalent to key operations on the actual instrument (except for control by power switch and measurement area switch)
In addition, by accessing (via remote desktop, etc. over a network) a computer connected to the spectrophotometer, control of the spectrophotometer is possible even from remote locations.

* CM-26dG series, CM-25cG, CM-17d series, or CM-M6 devices only.

SpectraMagic NX2 continues to evolve to meet customer needs

Ver.
~1.3

Greatly improved usability compared to previous NX
Added LED light sources
Added connection for new products "CM-17d/16d"

Ver.
1.4

Added Instrument Check App

Ver.
1.5

Added connection for new products "CM-3700A Plus"

What is Premium License?

SpectraMagic NX2 is also available as a term-based premium license (paid) which allows you to experience special value in addition to regular use.
By signing up this license, you can use the Instrument Check App that allows you to check the status of your instrument, as well as additional functions that come with version upgrades.
When you purchase this software, a **one-year free premium license** is included.

Main Specifications

Configuration Tool CM-CT1

<Compatible Instruments>

Measuring instruments	CM-17d/CM-16d, CM-26dG/CM-26d/CM-25d/CM-23d* ^{9,10} , CM-25cG* ¹⁰ , CM-M6, CM-700d/CM-600d, CM-5/CR-5* ^{9,10}
-----------------------	--

<Main features>

Features* ¹	Connect / Disconnect instrument, Display instrument information, Setting of instrument settings (System, measurement conditions, Display* ⁴ , Default tolerance, Target filter* ⁵ , User Index* ⁶), File import / export, Data output, Setting of calibration data, Remote control of instrument* ⁷ , WLAN connection settings* ^{8,10}
Supported file formats* ²	Input/output instrument settings file: *.cm17d, *.cm16d, *.cm26dg, *.cm26d, *.cm25d, *.cm23d, *.cm25cg, *.cmm6, *.cm700d, *.cm600d, *.cnd Output data file: *.csv Input calibration data file: *.cwl, *.cwm, *.cws, *.cw6, *.gum, *.gus Input/output WLAN connection settings file: *.wscf
Display languages	Japanese, English

<Minimum Computing Requirements*³>

OS	: Windows® 10 Pro 64 bit Version 1903 or higher/Windows® 11 Pro
CPU	: Intel® Core i5 2.7GHz or higher processor (recommended)
Memory	: 2GB or more (4GB or more recommended)
Storage	: 10GB or more
USB port	: Required for connection with measuring instrument, Required for SpectraMagic NX2 dongle

*1: The functions that can be displayed, set, and executed differ depending on the connected instrument.

*2: The file that can be input/output differs depending on the connected instrument.

*3: The hardware of the computer system must meet or exceed the greater of the recommended system requirements for the compatible OS being used or the above specifications.

*4: Available only when using CM-17d/16d, CM-26dG/26d/25d/23d, CM-25cG, CM-M6 or CM-5/CR-5.

*5: Available only when using CM-17d/16d, CM-26dG/26d/25d/23d or CM-25cG.

*6: Available only when using CM-17d/16d, CM-26dG/26d/25d/23d, CM-25cG or CM-5/CR-5 and only with SpectraMagic NX2 license.

*7: Available only when using CM-17d/16d, CM-26dG/26d/25d/23d, CM-25cG or CM-M6.

*8: WLAN settings possible when optional WLAN/Bluetooth® Module is installed.

*9: Not available in some countries.

*10: Instruments with new firmware versions only. Instruments with old firmware versions may not be supported. Click here for firmware versions of compatible instruments. ↓
