Color Management for global supply chains.

The Standard in Measuring Color & Light

KONICA MINOLTA

Giving Shape to Ideas

Highest level of repeatability with high interinstrument agreement, speed and usability.

The CM-26dG Series from Konica Minolta offers three variations of advanced portable spectrophotometers.

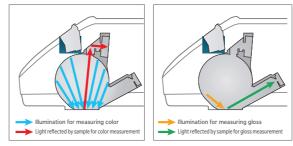

The high-end CM-26dG and CM-26d models bring the industry's highest level of accuracy, with the CM-26dG capable of simultaneously measuring color and gloss, and the CM-26d specifically for measuring color. The CM-25d is a single aperture model.

■ 2-in-1 instrument for

measuring color and gloss

The CM-26dG performs the job of two instruments by simultaneously measuring color and gloss. The integrated gloss sensor will significantly improve

the speed of the inspection process & remove the need for a separate gloss device.

Spectrophotometer

CM-26dG CM-26d CM-25d

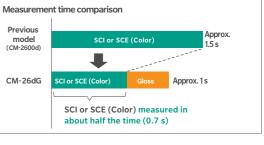

Highest levels of repeatability and inter-instrument agreement amongst portable spectrophotometers

Supply chains are constantly being built and modified, and data needs to be seamlessly shared amongst both internal and external partners. High repeatability and high inter-instrument agreement are increasingly prerequisites for portable spectrophotometers to expedite specification, supply and quality control. The CM-26dG and CM-26d realize the highest level of inter-instrument agreement amongst currently available portable spectrophotometers, at ∆E*ab 0.12 (BCRA average amongst 12 colors) ; this is around half that of their predecessor the CM-2600d. When measuring gloss, the inter-instrument agreement of the CM-26dG is within ±0.2 GU (0-10 GU) or ±0.5 GU (10-100 GU). The improved accuracy of the CM-26dG will allow supply chains to operate at closer tolerances and facilitate digital color communication, cutting reliance on physical standards, greatly improving timelines and associated costs.

Improved measurement speed

The CM-26dG measures color in about half the time of previous models, at approx. 0.7 second (SCI or SCE). Measurements of both color and gloss (SCI or SCE + Gloss) can be made in around 1 second.

The faster measuring speed directly improves efficiency.

Option Color Data Software SpectraMagic NX2

SpectraMagic NX2 is color management software that gives users a customizable screen display and a wide range of functions for operating and configuring their spectrophotometer or Chroma Meter from a computer. Users can display data lists and create color difference graphs and spectral graphs to assist in color management that requires judgment based on numerous values and indicators.

You can see the details in the catalog from the following 2D code. \downarrow

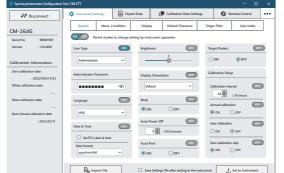

SpectraMagic NX2 web Site

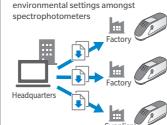

Spectrophotometer Configuration Tool CM-CT1 Ver.1.5 or later

The CM-CT1 gives manufacturers the means for easily and quickly setting up their CM-26dG Series spectrophotometers. Moreover, when multiple devices are used or when the same conditions need to be set amongst multiple factories or suppliers, settings can be compiled into a file and shared. Setting of User Index^{*1} has been added.

*1 :Function is available only with a valid activated SpectraMagic NX2 dongle or dongle-less license.

Easily unify measurement conditions and

Spectrophotometer Configuration Tool CM-CT1

OS: Windows[®] 10 Pro 64 bit Version 1903 or higher / Windows[®] 11 Pro

•CPU: 2.0 GHz equivalent or faster •Memory: 2 GB or more •Hard disk: 10 GB or more of free space for installation

•Other: USB port (For connecting to spectrophotometers and SpectraMagic NX2 dongle)

•Windows® is a trademark or registered trademark of Microsoft Corporation in the USA and other countries.

Viewfinder

The viewfinder brightly illuminates the measurement point with an LED to make target alignment, easier and more precise. The viewfinder of the CM-26dG also includes a target ring that makes it even easier to identify the measurement area.

Using the viewfinder greatly reduces measurement errors when setting measurement points on patterns and prints.

High usability and functional versatility

<JOB Function>

Measurement instructions (including photographs) for routine tasks can be uploaded to the instrument using SpectraMagic NX2 (sold separately).

<WLAN/Bluetooth[®] ready>

Data can be wirelessly transmitted to computers or other paired devices over a WLAN/Bluetooth connection.

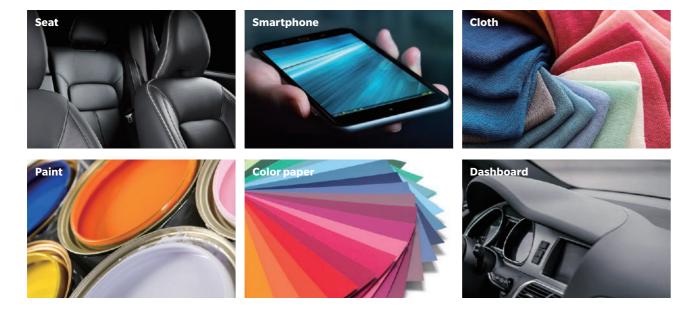

Compact, lightweight streamlined body

Designed to work in hard-to-reach places, the CM -26dG Series spectrophotometers allow users to take measurements where previous models could not. The nose is angled downward and rounded at the corners to get into cramped spots like dashboards at a point near the windshield.

The measurement button is accessible from both sides of the unit, improving usability for left handed operators or in otherwise difficult to reach areas.

CM-26dG Series spectrophotometers can be used in a wide range of industries.

Performance by model (Feature comparison)

	CM-26dG	CM-26d	CM-25d

Repeatability (σ∆E*ab)	<0.02	<0.02	<0.04
Wavelength range	360 to 740 nm	360 to 740 nm	400 to 700 nm

✓ Standard color automatic selection function

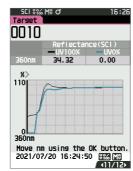

When this function is set, the optimum target color candidates for comparison from among the target colors registered in advance are automatically displayed after sample measurement. This makes it easy to determine the appropriate target color.

Even when various colors are measured in the inspection process in the automobile industry, etc., there is no need to manually reset the target color before measurement. The target color can be easily selected from the candidates displayed after measurement. This function can shorten the inspection time.

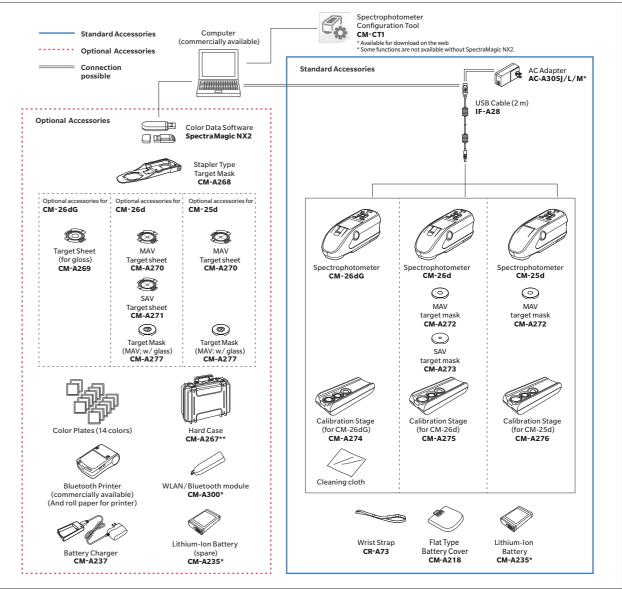

✓ Checking for fluorescent whitening agents and performing simple inspection (CM-26dG/CM-26d only)

Measurements under 100% UV and 0% UV can be taken at the same time and the results can be displayed on the same screen. This feature is useful to check for the presence of optical brighteners and perform simple inspection. By comparing and evaluating data such as reflectance under 100% UV and 0% UV, the characteristics of the base material and the effect of the fluorescent whitening material can be confirmed.
